
A
Belief in one's own efficacy
true p
compulsive: fixed k
variable k
accurate prior, fixed k
episode
B
Belief about the baseline hazard
true q
episode
C
What gets learned: the composite, not the parameters
compulsive: fixed k: λ_k
compulsive: fixed k: p
variable k: λ_k
variable k: p
accurate prior, fixed k: λ_k
accurate prior, fixed k: p
information gained (nats)
episode
D
Final posterior: compulsive: fixed k
iso-λ_k ridge through the truth, k ∈ [6]
resolution limit λ_k = 3/N
truth
baseline hazard q
preventive efficacy p
E
Final posterior: variable k
iso-λ_k ridge through the truth, k ∈ [0, 1, 2, 3]
resolution limit λ_k = 3/N
truth
baseline hazard q
preventive efficacy p
F
Never acting and always acting are equally uninformative
nats gained about p / correlation
about efficacy p
posterior corr(q, p)
repetitions k (design held fixed)
