One repetition count gives one likelihood ridge
A
k = 1
k = 2
k = 4
k = 6
Baseline hazard, q
Preventive efficacy, p
Diversity, not repetition, restores identifiability
B
Fixed k = 0
Fixed k = 1
Fixed k = 3
Fixed k = 6
Jittered {5,6,7}
Contrast {0,6}
Graded 0...6
Contrast {0,1}
rank 1 (det = 0)
log₁₀ det information (full-rank designs)
Any two distinct counts identify both parameters
C
First repetition count, k₁
Second repetition count, k₂
det information
